I Cannot Access Devices on My Local Network

Travis - 2022-03-29 - Other Devices

The PIA app essentially acts as a firewall thus blocking local devices. You can however connect to these devices by enabling the **'Allow Local Network'** option. This should allow access to local network devices such as NAS servers, home servers, printers, Chromecast, etc. with PIA connected. You can enable this by going to **Settings>Network>**check the box next to **"Allow LAN traffic".**
