Add ability to save "locations" Awaiting Review

It would be nice to be able to save a location, such as "home" where we can then allow certain sites or apps to bypass the VPN. For example, when at "home" i would allow Hulu and Disney+ to bypass the VPN, but not when "traveling". I use the VPN for privacy and safety, but the streaming services end to block access when it sees the traffic coming from PIA. I understand that many people use the VPN for other uses, but for me it is solely to protect my data when traveling and need to use a hotel/retail hotspot.
