Split tunnelling through command line. Awaiting Review

- K Kyle
- **Forum name:** #Suggestion

I am running a headless ubuntu server, because of this I cannot access the desktop app's GUI, so it would be nice to have an option to enable split tunnel through piactl or some other easy to use command line interface, as I need to have some programs accessible outside the vpn, for port forwarding reasons (e.g I need to port forward multiple programs, whilst still having one run through the vpn).
