Usability: Auto connect to "my favourites only". I don't want to connect to an irrelevant country. Awaiting Review

I believe that it requires low development effort.

Issue:

I noticed that "auto" connect sometimes makes poor choices to connect to a country as far as 8 hours flight away although there are much closer and better-performing countries.

Solutions/Suggestions:

Option 1) I suggest that by default "auto" connect should choose servers from our favorite

countries only. My logic is simple, there is no point in connecting to a country I don't prefer.

Option 2) Alternatively, a new option "Auto connect to favorites" can be created.
