Are there any restrictions on what characters can be used in my password?

- 2022-03-29 - Account Password/ Username

Passwords for our VPN service allow any standard characters on a keyboard, as well as many special characters. The special characters allowed are listed below:

! " # \$ % & ' () * + , - . / < = > ; : ? @ [\] ^ _ ` { | } ~

Spaces are also permitted. For example, your password could be something like:

- Pi@ Ru!3\$,
- Pri\A73In7Ern3TACce\$S

There is no restriction on the maximum number of characters allowed in a password. Passwords can be as long as you please but must be at least 8 characters for the best security we highly suggest that your password will be more than 10 characters.

For more information on password security please review our Article "[Security Best Practices - Part 1: Passwords](#)".
