[RESOLVED] Server Outage - February 25th

2022-02-25 - Devin S - Announcements

We are currently experiencing a widespread issue with all server locations within our desktop clients (Windows, MacOS, & Linux). Server locations are being displayed as grey and do not allow users to connect successfully. We are aware of this matter, and we are addressing the outage as a top priority.

This being the case, we appreciate your patience as we bring these server locations back online.
