The Full Release of Port Forwarding and Manual Connection Scripts

2020-10-12 - Devin S - Announcements

We are proud to announce the full release(v1.0.0) of our Manual Connection and Port Forwarding Scripts! With these scripts being created to establish manual connections both with and without port-forwarding for Wireguard and OpenVPN on the Next Generation Network, our team has written up an article which includes instructions on how to use the script, which can be referenced, here.

With the continued contributions from our community, we were able to make this possible! As always, should you experience any issues with these new methods, please don't hesitate to reach out to our support team via chat or by submitting a ticket, here.
